

Proud to Power Off-Highway Vehicles (OHV)

Wabtec's Optimized Integrated Electric Drive Systems

Our Optimized Integrated Electric Drive Systems deliver exceptional quality, customer value, and unparalleled technology. In both propulsion and retarding, they outperform other drives of equivalent payloads. They're faster on the level and on grade. They have a greater retarding range, including a continuous retarding capability to near zero speed. They feature fewer high-service components and longer component life. They offer lower operating and life cycle costs with improved horsepower utilization, reduced maintenance and enhanced tire life.

Electrifying your mining operations is **good for the planet:**

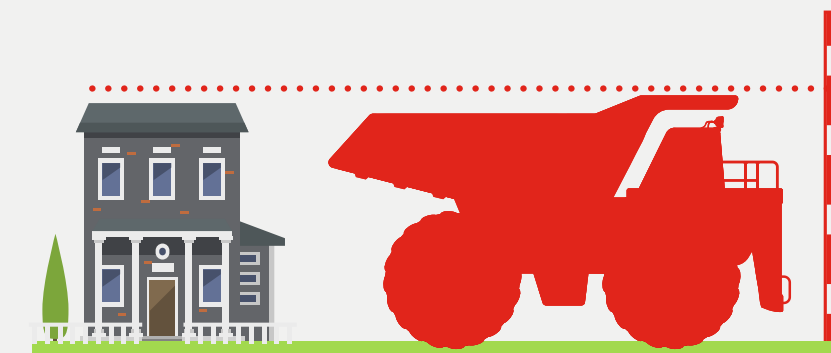

50% reduced greenhouse gases

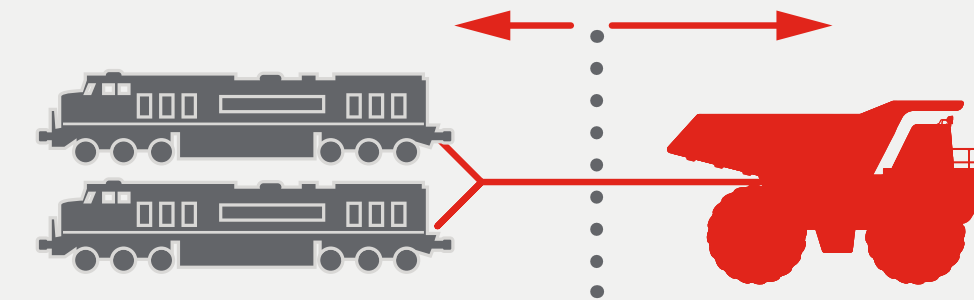

70% decreased energy consumption

Capable of hauling **2 locos** in the bed at once

It's a **1.4^M lb,** two-story house on wheels

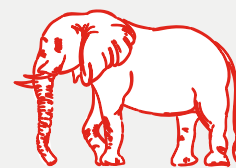

More tractive effort than **2 locos** combined

400^T
Payload

62x

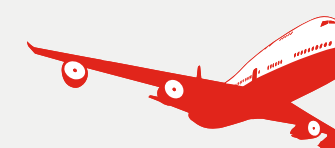

African Bush Elephants

2.4 Million

Baseballs

1x
