

LB-8 MAGNET VALVE PORTIONS

Transient Voltage Suppressor Upgrade

NOVEMBER, 1997

Wabtec has developed an improved **Transient Voltage Suppressor, Pc. No. 653682**, for use on the LB-8 Magnet Valve Portions. This new device is being issued as an alternate standard, and can be substituted in place of standard suppression diode, Pc. No. 303894, where a higher level of protection against voltage transients is desired.

Figure 1 depicts proper installation of the Wabtec Transient Voltage Suppressor to the LB-8 Magnet Valve Portion.
