

Wabtec's Digital Solutions

ExpressYard[®]

Maintenance Management System

Core Capabilities

- Audit repairs against AAR/custom rules and pricing
- Load, view, and print monthly invoice files
- Track exceptions and perform counter billing
- Automate assignment of repair responsibility
- Customizable reports over all of your fleet data

Differentiating Features

- Simplify railcar analysis through customizable business intelligence reporting
- Utilize component failure mileage data to predict maintenance repair needs
- Repair history, mileage data, and exception information all in one location

Optimized Outcomes

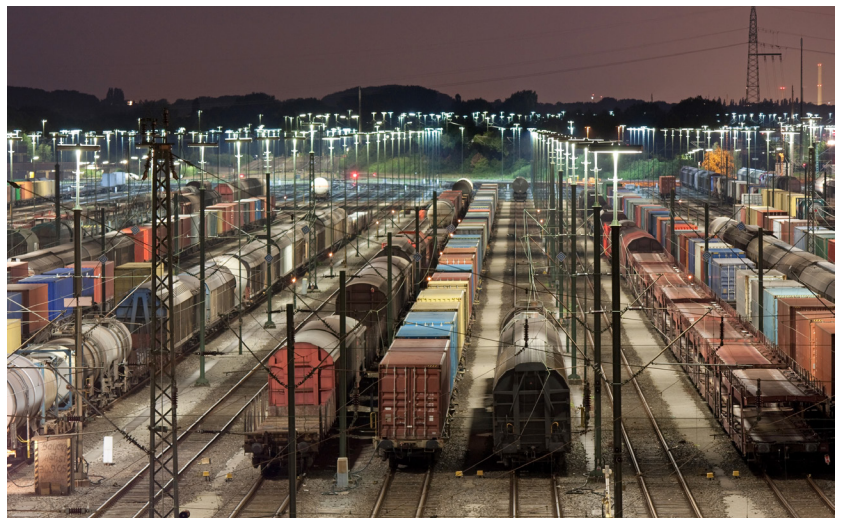

- Increased operational efficiency
- Reduced railcar repair and maintenance costs
- Increased predictability
- Increased fleet utilization

Gain a competitive advantage in railcar management.

Mechanical characteristics. Mileage data. Car configuration. Repair history. These are just a few of the factors that influence the cost and predictability of railcar maintenance — and its impact on the bottom line of your business.

ExpressYard Maintenance Management System (MMS) enables railcar owners, leasing companies, railroads, and rail shippers to leverage real time data to improve maintenance and repair decisions, reduce costs, and drive operational excellence. Audit repairs against AAR/custom rules and pricing. Track exceptions and perform counter billing. MMS reduces re-billing and collection time, automates invoicing, helps prevent payment of incorrect charges, and drives predictability in railcar maintenance.

The result? Enhanced operational efficiency. Increased utilization. Reduced railcar repair and maintenance costs.
